PROFESSIONAL SUMMARY

Machine Learning Engineer and Backend Developer specializing in scalable MLOps infrastructure, Retrieval-Augmented Generation (RAG) pipelines, and high-performance execution algorithms. Proven ability to architect containerized applications, manage cloud deployments, and optimize distributed systems. Transitioning from a rigorous foundation in leadership and ethical formation into computer science, bridging the gap between raw data processing and robust, production-ready software solutions.

TECHNICAL SKILLS

Languages & Scripting: Python, Rust, Node.js (Express.js), PHP (Laravel), SQL, Bash.

AI/ML & Data Platforms: Retrieval-Augmented Generation (RAG) architecture, Gemini API, DeepSeek, PyTorch, TensorFlow, Scikit-learn, ChromaDB, Qdrant.

Cloud & MLOps Infrastructure: Docker, Kubernetes, Oracle Cloud Infrastructure (Ampere A1), AWS (EC2, S3), Cloudflare (DNS/Reverse Proxy), GitHub Actions CI/CD.

Databases & Tools: PostgreSQL, MongoDB, SQLite, Redis, Git, Linux (Ubuntu).

TECHNICAL EXPERIENCE & PROJECTS

Docu-Chat: RAG-Powered AI Document Analysis System

Aug 2025 - Present

Stack: Python, FastAPI, Docker, ChromaDB, Gemini API, Oracle Cloud, Cloudflare

Live Deployment: <https://njoku-ai.systems/>

- Architected and deployed a containerized machine learning backend on a dedicated Oracle Ampere server, optimizing memory allocation for heavy-duty PyTorch embedding generation.
- Implemented a Retrieval-Augmented Generation (RAG) workflow using the Gemini API and ChromaDB for high-speed, localized vector searches and semantic retrieval.
- Configured advanced cloud networking, utilizing Cloudflare as a reverse proxy for automated SSL encryption, DNS routing, and secure external access.
- Built an SQLite-based ingestion tracker to monitor asynchronous document processing jobs and streamline vector search queries.

Algorithmic Trading & Hedging Engines

2025 - Present

Stack: Rust, Python, Bybit API, Telegram Bot API, Solana, Jito

Live Integration: <https://t.me/bottonybetbot>

- Developed automated cryptocurrency trading bots and arbitrage execution engines capable of real-time market data processing.
- Built an interactive Telegram Bot interface to deliver real-time quantitative analysis, match statistics, and market evaluation directly to end-users.
- Integrated technical indicators including RSI, EMA, VWAP, and Donchian channels, with custom state-machine execution logic for precise limit-order fulfillment.
- Optimized asynchronous network calls in Rust for minimal latency when interfacing with centralized exchanges (Bybit) and decentralized networks.

LinguaNotes: AI Video Summarization Pipeline

Aug 2026 - Present

Stack: Python, Chrome Extension API, Map-Reduce LLM Logic, Paystack

- Engineered a full-stack Chrome extension and backend application that ingests and summarizes long-form YouTube content into structured English notes, chapters, and flashcards.
- Developed backend API endpoints utilizing map-reduce summarization logic to handle large token contexts efficiently.
- Integrated Payscale payment processing scripts to handle automated client subscriptions and export utilities.

Stealth LLM System

Jun 2025 – Present

Stack: Advanced LLMs, Backend Orchestration

- Designing an advanced backend architecture focused on LLM inference optimization, API orchestration, and low-latency response systems (Under NDA).

E-Commerce REST API & Backend Systems

Feb 2025 – Apr 2025

Stack: Node.js, Express.js, JWT, MongoDB

- Designed a secure, scalable e-commerce architecture featuring robust JWT-based authentication and Role-Based Access Control (RBAC).
- Developed comprehensive product management, checkout, and order lifecycle systems, maintaining strict data integrity protocols.

MLOps & Cloud Infrastructure Deployment

Ongoing

Stack: Docker Compose, Kubernetes, AWS EC2/S3, GitHub Actions, TensorFlow Serving

- Containerized complete machine learning lifecycles (preprocessing, training, inference deployment) using Docker to ensure environment consistency.
- Configured Kubernetes pods and load balancers to simulate and manage high-availability machine learning inference workloads.
- Automated continuous integration and model versioning pipelines via GitHub Actions.

EDUCATION

Bachelor of Science in Computer Science

Nov 2023 – Nov 2025

University of the People

Accelerated graduation path utilizing transfer credits; focused on backend engineering, distributed systems, and algorithms.

Associate Degree in Computer Science

Nov 2022 – Nov 2023

University of the People

West African Senior School Certificate (WAEC)

2014 – 2020

Emmanuelite Junior Seminary

Achieved foundational academic excellence during rigorous secondary education.

LEADERSHIP & CHARACTER FORMATION

Senior Prefect & Spiritual Year Participant

2020 – 2022

- Completed an intensive two-year post-secondary formation period focused on discipline, ethics, and leadership.
- Served as a Senior Prefect for one year, actively mentoring junior students, mediating conflicts, and organizing community schedules.
- Dedicated a secondary “Spiritual Year” to philosophical study, community service, and rigorous character development before transitioning to a full-time computer science education.
