Professional Summary

Results-driven **AI/Machine Learning Engineer and MLOps Specialist** with a strong foundation in **backend systems**, data-driven problem-solving, and cloud deployment. Experienced in developing, deploying, and maintaining scalable ML pipelines and intelligent automation systems. Adept at integrating machine learning into production environments using MLOps workflows and DevOps principles. Passionate about transforming data into actionable insights and building ethical, real-world AI solutions.

Core Competencies

- **AI/ML Development:** TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy, Gemini (LLMs)
- **MLOps & Deployment:** Docker, Kubernetes, TensorFlow Serving, ONNX, AWS (EC2, S3, Lambda), CI/CD (GitHub Actions), Firebase
- **Backend Engineering:** Node.js, Express.js, PHP, Laravel, Flask, FastAPI
- **Databases:** MySQL, PostgreSQL, MongoDB
- **Emerging Skills:** NLP, Computer Vision, Edge AI, Model Quantization
- **Tools:** Git, VS Code, Jupyter, Postman, Linux (Ubuntu), WSL

AI & Machine Learning Projects

Doc-chat: RAG-powered Document

Developed an intelligent document chatbot system using Retrieval-Augmented Generation (RAG) and Gemini AI.

Provides instant, context-aware answers from uploaded documents.

Features secure user authentication, document upload, and real-time chat interface.

Built with Python (Flask backend) and modern JavaScript frontend.

Integrated ChromaDB for fast document retrieval and scalable storage.

Focused on usability, privacy, and seamless AI-powered document interaction.

My github repo to access the live URL <https://github.com/Starislauz/doc-chat-ML-AI-Mlops>

Diabetes Prediction System

- Developed a predictive model with **89% accuracy** using Scikit-learn.
- Deployed using Flask with an interactive interface for real-world use.
- Focused on interpretability and healthcare insights.

Gemini-Powered Command-Line Assistant

- Built a terminal-based chatbot using **Google's Gemini API** for contextual interaction.
- Integrated through REST APIs and SDK for seamless development workflows.

Stealth LLM Project (Under NDA)

- Architecting an advanced AI solution powered by large language models (LLMs).
- Managed backend scalability, inference optimization, and API orchestration.

MLOps & Cloud Deployment Projects

Dockerized ML Pipeline

- Containerized a full ML lifecycle: preprocessing, training, deployment.
- Implemented **TensorFlow Serving** and **Docker Compose** for production use.

AWS Cloud Setup (In Progress)

- Deploying models to **AWS EC2 & S3** using automated CI/CD workflows.
- Integrating GitHub Actions for seamless retraining and model versioning.

Kubernetes Deployment Simulation

- Deployed scalable ML inference workloads using **Kubernetes orchestration**.
- Configured pods, services, and load balancers for high-availability setups.

Backend & Automation Projects

E-commerce REST API (Express.js)

- Designed a secure, scalable architecture with JWT authentication and RBAC.
- Implemented product management, order systems, and admin controls.

VTU Recharge & Bill Payment Platform(Laravel PHP)

- Built a robust backend supporting airtime, data, and utility payments.
- Integrated secure payment gateways with real-time transaction monitoring.

Smart Telegram Automation Bot

- Developed an AI-powered bot for support, FAQs, and order tracking.
- Reduced manual support workload by over **60%**.

FalconFX Academy Platform

- Engineered a web platform for traders with course modules and live insights.
- Ensured scalable and modular backend using Laravel.

Education

Bachelor of Science in Computer Science – University of the People (UoPeople)

Associate Degree in Computer Science – University of the People (UoPeople)

Certifications & Professional Development

- Machine Learning Specialization (Coursera) – *In Progress*
- AWS Cloud Practitioner (Amazon) – *In Progress*
- Backend Development with PHP & Laravel – *Completed*

Key Strengths

- Full-cycle ML expertise: from data engineering to production deployment.
- Strong backend development for AI integration and system scalability.
- Deep understanding of cloud infrastructure and CI/CD automation.
- Excellent communicator and cross-functional collaborator.

Career Objective

To contribute as an **AI/MLOps Engineer** or **Machine Learning Developer**, leveraging my expertise in automation, cloud infrastructure, and intelligent systems to deliver innovative, scalable, and impactful AI solutions for global organizations.
